

STOFF2 receives a prestigious award as "Electrolyzer For Green Hydrogen Company of the Year in Europe 2024"

Great success for STOFF2: The company has been named "[Electrolyzer for Green Hydrogen Company of the Year in Europe 2024](#)" by Energy Business Review.

Energy Business Review is a print and digital magazine that focuses on comprehensive coverage of the energy industry. The magazine offers insights into technological innovations and solutions and is aimed at decision-makers and professionals in the energy sector.

"This award is an important step on our way to making green hydrogen marketable on a large scale," emphasizes Sebastian Sipp, Managing Director of STOFF2.

Our innovative zinc intermediate step electrolysis from STOFF2 makes it possible to rely entirely on renewable energies in all sectors. We use particularly cheap green electricity and store it efficiently in the form of zinc. This stored energy can be released at any time in the form of green hydrogen, exactly when it is needed. In this way, we are creating a reliable and sustainable solution for energy supply that responds flexibly to demand and can replace fossil fuels.

The award gives us additional momentum in the market launch of this groundbreaking ZZE technology. STOFF2's goal is to use this innovative solution to replace fossil fuels in the long term and thus pave the way for a sustainable energy future. The award underlines STOFF2's leading role in the hydrogen economy and the importance of our technology for a successful energy transition.
